Introduction

Thank you for purchasing a Panasonic product. Before you use the product, please carefully read through the installation instructions and the manuals, and understand them in detail to use the product properly.

Types of Manuals

- There are different types of manuals for the GM1 series, as listed below. Please refer to a relevant manual for the unit and purpose of your use.

These manuals can be downloaded from our website: <https://industry.panasonic.com/global/en/products/fasys/plc/mc/gm1>

Manuals for GM1 series

Manual name	Manual code	Manual description
GM1 Series Reference Manual (Hardware Edition)	WUME-GM1H	Explains the functions and performance of each GM1 unit.
GM1 Series Reference Manual (Instructions Edition)	WUME-GM1PGR	Explains the specifications of each instruction that can be used with the GM1 Series.
GM1 Series Reference Manual (Analog I/O Unit Edition)	WUME-GM1AIO	Explains the functions and performance of the GM1 Analog Expansion Unit.
GM1 Series Reference Manual (Pulse Output Unit Edition)	WUME-GM1PG	Explains the functions and performance of the GM1 Pulse Output Unit.
GM1 Series Reference Manual (Serial Communication Unit Edition)	WUME-GM1SC	Explains the functions and performance of the GM1 Serial Communication Unit.
GM1 Series User's Manual (Operation Edition)	WUME-GM1OP	Explains how to use GM Programmer and PANATERM Lite for GM, set up each function, create projects, and perform other operations.

1.1 Safety Precautions.....	1-2
1.2 Handling Precautions.....	1-3

1.1 Safety Precautions

1.1 Safety Precautions

This section explains important rules that must be observed to prevent personal injury and property damage.

- Injuries and damages that may occur as a result of incorrect use are classified into the following levels and safety precautions are explained according to the level.

 WARNING	Indicates that there is a risk of death or serious injury
 CAUTION	Indicates that there is a risk of minor injury or property damage

	Indicates an action that is prohibited
	Indicates an action that must be taken

 WARNING	
	<ul style="list-style-type: none">• Take safety measures outside this product to ensure the safety of the entire system even if this product fails or an error occurs due to external factors.
	<ul style="list-style-type: none">• Do not use this product in atmospheres that contain flammable gases. Doing so may result in explosion.
	<ul style="list-style-type: none">• Do not throw this product into the fire. Doing so may cause the batteries or other electronic parts to explode.

 CAUTION	
	<ul style="list-style-type: none">• To prevent abnormal heat generation or smoke generation, use this product with some leeway from the guaranteed characteristics and performance values of the product.
	<ul style="list-style-type: none">• Do not disassemble or modify this product. Doing so may result in abnormal heat generation or smoke generation.
	<ul style="list-style-type: none">• Do not touch any terminals while the power is on. Doing so may result in electrical shock.
	<ul style="list-style-type: none">• Configure emergency stop and interlock circuits outside this product.
	<ul style="list-style-type: none">• Connect wires and connectors properly. Failure to do so may result in abnormal heat generation or smoke generation.
	<ul style="list-style-type: none">• Do not perform work (such as connection or removal) with the power turned on. Doing so may result in electrical shock.
	<ul style="list-style-type: none">• If this product is used in any way that is not specified by Panasonic, its protection function may be impaired.
	<ul style="list-style-type: none">• This product has been developed and manufactured for industrial use only.

1.2 Handling Precautions

- In this manual, the following symbols are used to indicate safety information that must be observed.

	Indicates an action that is prohibited or a matter that requires caution.
	Indicates an action that must be taken.
 Info.	Indicates supplemental information.
 Note	Indicates details about the subject in question or information useful to remember.
 Procedure	Indicates operation procedures.

2 System Configuration

2.1 Outline of the GM1 System.....	2-2
2.2 Restrictions on the Number of Expansion Units	2-3
2.3 Programming Tools	2-4

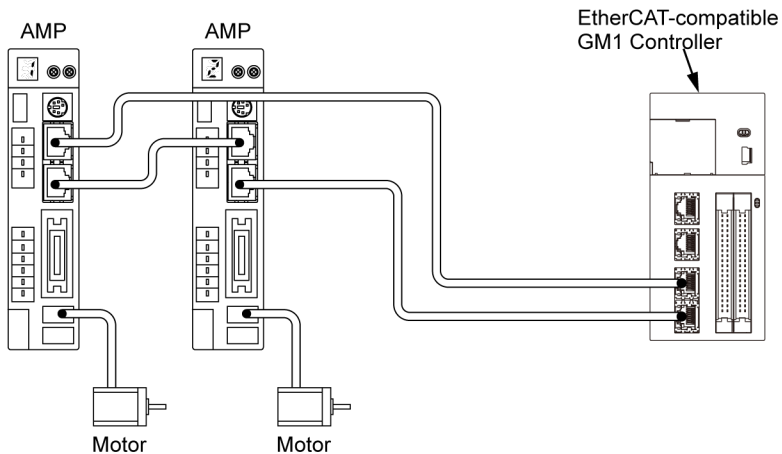

2.1 Outline of the GM1 System

2.1 Outline of the GM1 System

■ Network control

With the RTEX-compatible GM1 Controller, a MINAS series A6N/A5N servomotor network system can be easily configured using the RTEX network dedicated to motion control.

The EtherCAT-compatible GM1 Controller is a MINAS series servomotor network system can be easily configured by adopting EtherCAT communication.

■ Two LAN ports

There are two Ethernet connection ports.

Each port can have a unique IP address. They can be used for different purposes, such as for an in-device network or for a host system network.

■ Equipped with the high-speed counter input and PWM output

The RTEX-compatible GM1 Controller / EtherCAT-compatible GM1 Controller is equipped with a 2-ch high-speed counter input for 16 MHz (multiplied by 4) and a 4-ch PWM output that can output a maximum of 100 kHz. These functions can be used without adding expansion units.

2.2 Restrictions on the Number of Expansion Units

Up to 15 expansion units can be mounted on the right side of the GM1 Controller (RTEX-compatible / EtherCAT-compatible).

Example: For RTEX-compatible GM1 Controller

(1)	RTEX-compatible GM1 Controller	(2)	Expansion units	(3)	End unit ^(Note 1)
-----	--------------------------------	-----	-----------------	-----	------------------------------

(Note 1) Make sure to connect an end unit to the end of the system.

No.	Name	Function
(9)	USB port	Used to connect to a personal computer that uses a tool software. (miniB type)
(10)	Mode selector switch	Used to change the mode to RUN or STOP. Regardless of whether the switch is set to RUN or STOP, the mode can be switched through remote operation from the GM Programmer. When power is turned ON, it operates in the mode set on the switch.
(11)	DIN rail attachment part	This is the part which is attached to the DIN rail.
(12)	Unit connector	This is a connector to which each expansion unit is connected. An end unit is fitted when the unit is shipped.
(13)	Dip switches 	SW1 : Do not change the setting. It is set to ON as the factory default. SW2 : Reset bit This is the switch used to reset the devices. If the power supply is turned ON with the mode selector switch set to STOP and the reset bit set to ON, the "Device reset (GM1 initialization)" function is implemented
(14)	DIN hook	Used to fix the Controller to a DIN rail
(15)	COM port terminal	Serial (RS-232C) connector
(16)	Power supply connector	24 V DC power supply connector

(Note 1) Do not apply an excessive force to the card cover when opening or closing it or when the cover is left open.

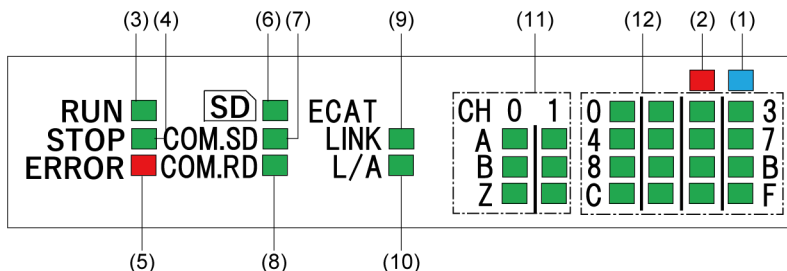

Otherwise, the cover attachment part will be deformed to cause malfunction in the cover switch mounted inside the product.

■ Functions of operation monitor LEDs

No.	Name	LED color	Function
(1)	Power	Blue	Indicates the power state of the unit. Lit: Power supply of the unit is started normally. Unlit: Power is not supplied. Or, there is an error in the power supply to the system.
(2)	Alarm	Red	Indicates that an alarm has occurred in the system. Lit: System error Unlit: Normal
(3)	RUN	Green	Indicates the operating state of the application.
(4)	STOP	Green	RUN (Lit) and STOP (Unlit): The application is in the operating state. RUN (Unlit) and STOP (Lit): The application is in the stopped state. RUN (Unlit) and STOP (Unlit): No application exists.
(5)	ERROR	Red	Indicates that an error has occurred in the system. Flashing: An error occurred. (Flashing cycle: ON for 0.5 sec and OFF for 0.5 sec) Unlit: Normal
(6)	SD	Green	Indicates an access state to the SD memory card. Lit: Currently accessing to the SD memory card Unlit: No access to the SD memory card
(7)	COM.SD	Green	Flashes while data is transmitted from the COM port.
(8)	COM.RD	Green	Flashes while data is received by the COM port.
(9)-1	RTEX STATUS	Green	Indicates the packet transmission / reception state through motion communication. Lit: Communication is established with normal communication. Flashing: Starting up Unlit: Communication is not established.
(9)-2	ECAT LINK	Green	Indicates the LINK state of EtherCAT communication. Lit: EtherCAT communication LINK is established. (= Operational mode) (All slave devices connected to the master device are in the Active state.) Flashing: EtherCAT is starting up. (When the Active state turns OFF due to wire disconnection or other reasons while the master device is in the Active state) Unlit: EtherCAT communication is not established. (When the master device is invalid or does not exist)
(10)-1	RTEX LINK	Green	Indicates the LINK state of motion communication. Lit: Normal connection (The TX of the sending node and the RX of the local node are electrically connected normally.) Unlit: Not connected
(10)-2	ECAT L/A	Green	Indicates the state of the physical port of EtherCAT communication. Lit: PHY LINK is established and data are transmitted / received. Flashing: PHY LINK is established and data are not transmitted / received. Unlit: PHY LINK is not established.
(11)	CH0 A、B、Z	Green	Indicates the status of the high-speed counter input signal

5.2.1 Communication Specifications

Specifications of the RTEX Port

Item	Specifications
Baud rate	100 Mbps
Physical layer	100BASE-TX full duplex (IEEE 802.3u)
Insulation method	Pulse transformer
Communication cycle	500 μ s to 2 ms
Command update period	500 μ s to 4 ms
Number of connectable axes	32 real axes , 20 virtual axes (Total 52 axes)

Specifications of the EtherCAT Port

Item	Specifications
Baud rate	100 Mbps
Physical layer	100BASE-TX full duplex (IEEE 802.3u)
Insulation method	Pulse transformer
Communication cycle	500 us or more
Number of connectable axes	32 real axes , 20 virtual axes (Total 52 axes)

Specifications of the LAN Port

Item	Specifications	
Number of ports	2	
Communication interface	Ethernet 100BASE-TX / 10BASE-T	
Baud rate	100 Mbps / 10 Mbps, automatic negotiation	
Communication protocol	TCP/IP UDP	
No. of simultaneous connections	LAN1	Max. 16 units (System connection: 1 unit, user connection: 15 units)
	LAN2	Max. 32 units, general-purpose: 16 units A cycle restriction is applied depending on the total number of connections.
Communication method	Full-duplex / half-duplex communication	
TCP/IP protocol	TCP/IP compliant (IPV4)	

Item		Specifications
LED display	LINK	Lit when connection is established with the device on the Ethernet network.
	ACT	Flashes when some communication is performed such as transmitting commands and responses with the devices with established connections.

Specifications of the COM Port (RS-232C)

Item		Specifications
No. of channels		1
Physical layer		RS-232C, three-wire system (non-isolated)
Communication mode		1:1 communication
Communication method		Half-duplex transmission
Baud rate		9600/19200/38400/57600/115200 bps
Communication format	Data length	7 bit/8 bit
	Parity	None, odd, even
	Stop bit	1 bit/2 bit
	Start code	None
	End code	None

Specifications of the USB Port

Item		Specifications
Standard		USB2.0 Fullspeed
Connector shape		USB MiniB type

5.2.2 Performance Specifications

Item		Specifications
SD (SDHC) memory card	Support media	SD memory card, SDHC memory card Max.32 GB
	Supported format standard	Conforms to SD standard.
	Operating mode indicator	LED display (Flashes when accessed.)
	Detection when the cover is open	Available
Memory capacity	Program	16 MB
	Variable (non-hold)	16 MB
	Variable (hold)	192 kB
Clock / calender	Clock accuracy	95 seconds max. per month (at 0°C) 15 seconds max. per month (at +25°C)

5.2 GM1 Controller

Item		Specifications
		130 seconds max. per month (at +55°C)
	Holding time maintained by the internal capacitor when a power failure occurs	14 days or more (at +25°C) (Note 1)

(Note 1) The power-ON time of five minutes or longer is required.

5.2.3 I/O specifications

High-speed counter input part

■ Input specifications

Item	Specifications		
	Input A, B, Z signals		
	24 V DC	5 V DC	
Open collector connection		Line driver connection	
Insulation method	Optical coupler		
Rated input voltage	12 V DC to 24 V DC	5 V DC	Equivalent to AM26LS31
Operating voltage range	10.8 V DC to 26.4 V DC	3.5 V DC to 5.5 V DC	
Input points per common	Independent common for each point		
Min. ON voltage / Min. ON current	10 V DC/4 mA	3 V DC/4 mA	
Max. OFF voltage / Max. OFF current	2 V DC/2 mA	1 V DC/0.5 mA	
Input impedance	Approx. 3.9 kΩ	Approx. 560 Ω	
Operating mode indicator	6-point LED display

5.2 GM1 Controller

General-purpose I/O part

Input specifications

Item		Specifications
Insulation method		Optical coupler
Rated input voltage		24 V DC
Rated input current		Approx. 3 mA (at 24 V DC)
Input impedance		Approx. 6.8 k Ω
Operating voltage range		21.6 V DC to 26.4 V DC
Min. ON voltage / Min. ON current		19.2 V DC/6 mA
Max. OFF voltage / Max. OFF current		2.4 V DC/1 mA
Response time	OFF→ON	135 μ s or less (Possible to change by using the input time constant selection function)
	ON→OFF	135 μ s or less (Possible to change by using the input time constant selection function)
Input points per common		16 points/common
Operating mode indicator		16-point LED display (Lit when ON, SW selection)
External connection method		Connector connection (Compliant with the MIL standard, 40P)

■ Output specifications (Sink type)

Item	Specifications	
Insulation method	Optical coupler	
Output type	NPN open collector	
Rated load voltage	5 V DC to 24 V DC	
Allowable load voltage range	4.75 V DC to 26.4 V DC	
Max. load current	0.1 A	
Common restrictions	1.6 A/Common	
Max. inrush current	1.0 A	
OFF state leakage current	1 μ A or less	
ON state max. voltage drop	0.7 V or less	
Response time	OFF→ON	6 μ s or less (at +25 °C)
	ON→OFF	15 μ s or less (at +25 °C)
External power supply	Voltage	4.75 V DC to 26.4 V DC
	Current	15 mA or Less (at 24 V DC)
Surge absorber	Zener diode	
Short-circuit protection	Provided (to automatically protect every eight points) (Note 1)	
Input points per common	16 points/common	
Operating mode indicator	16-point LED display (Lit when ON, SW selection)	
External connection method	Connector connection (Compliant with the MIL standard, 40P)	

(Note 1) When the maximum inrush current is exceeded, eight output points in the same protection block are turned OFF simultaneously.

■ I/O specifications

- The Pulse Output Unit uses two connectors. The signal pins for two axes are assigned to one connector.
- AX1 and 2, and AX3 and 4 connectors have the completely same pin assignments. Therefore, the same pin number functions the same.
- Between the Transistor type and the Line driver type, the output terminal performance is different. However, the specifications of the input terminal and the power supply terminal are the same for both types.

6.1 GM1 Controller

6.1.1 Wiring the Power Supply

Wiring

■ **Wiring the Power Supply**

Units	Wiring diagram
GM1Controller (RTEX,EtherCAT)	 <p>Power supply connector</p> <p>Power supply cable (accessory)</p> <p>Brown: +24 V</p> <p>Green: Function earth</p> <p>Blue: 0 V</p>

■ **Selection of a power supply**

- To protect the system against erroneous voltage from the power supply line, use an insulated power supply with an internal protective circuit (power supply with reinforced insulation or double insulation).
- The regulator on the unit is a non-insulated type.
- Select a power supply larger than the capacity of the units to be connected. In the minimum configuration, select a power supply of 24 W or larger.

■ **Power supply voltage**

- Confirm that the voltage of the power supply to be connected is within the allowable range.

Rated input voltage	Allowable voltage range	Rated output capacity
24 V DC	20.4 to 28.8 V DC	24 W or more

■ **Power supply cable**

- Use the power supply cable (Part No.:AFPG805) that comes with the unit to connect the power supply.

length	Size	Specifications	Product No.
1m	AWG#24	Brown : 24 V DC,Blue : 0 V,Green : Function earth	AFPG805

- Also, twist the power supply cables to minimize adverse effects from noise.

Grounding

■ Use dedicated grounding

- The grounding connection should have a resistance of 100 Ω or less.
- The point of grounding should be as close to the GM1 as possible. The ground wire should be as short as possible.
- Sharing the ground with another device may have an adverse effect. Therefore, be sure that grounding is dedicated.

Possible

Not possible

- **Conversely, depending on your environment, grounding may cause a problem.**

As for the GM1 Controller (RTEX-compatible / EtherCAT-compatible), since its power supply line is connected to the function earth through a high-voltage capacitor, it is no problem.

Power supply line to the GM1 expansion unit

- **Do not ground the function earth when grounding a plus (+) terminal of the power.**

When grounding a plus terminal of the power supply, prepare a power supply dedicated to the GM1 and do not ground the plus terminal of the GM1 power supply. In some personal computers, the SG terminal of the internal circuit and shielding are connected. Furthermore, since the power supply circuit for the GM1 is not isolated, if the plus terminal of the power supply is grounded, the power supply will be short circuited to cause a breakdown.

Precautions

■ Selection of a power supply

- Use a low noise power supply.
- The inherent noise resistance is sufficient for the noise superimposed on the power wires, however, the noise can be attenuated further by using the isolation transformer / insulated power supply.

■ Isolation of power supply systems

Wiring to the units, I/O devices, and other power devices should have separate wiring systems.

■ Power supply sequence

- Have the power supply sequence such that the power supply of the GM1 Controller (RTEX-compatible / EtherCAT-compatible) turns OFF before the power supply for input and output.
- If the I/O power supplies are turned OFF before the power to the GM1 Controller (RTEX-compatible / EtherCAT-compatible), the GM1 Controller (RTEX-compatible / EtherCAT-compatible) will detect the input fluctuations and may begin an unscheduled operation.

6.1.2 Wiring of Network

Wiring to RTEX · EtherCAT ports

RTEX

Item	Specifications
Cable	Shielded twisted pair (TIA/EIA-568B CAT5e or higher)
Topology	Ring
Connector	8-pin RJ45
Maximum cable length	Between nodes: 100 m, total length: 200 m

- Connect the cable that is connected to the "TX" of the GM1 Controller (RTEX) to the "X2A Connector (RX)" of the servo amplifier. In the same way, connect between amplifiers from X2B (TX) to X2A (RX). Connect them in a loop in such a way that X2B (TX) of the end amplifier is connected to the "RX" of the GM1 Controller (RTEX)

EtherCAT

Item	Specifications
Cable	Shielded twisted pair (TIA/EIA-568B CAT5e or higher)
Topology	Daisy chain (No branching)
Connector	8-pin RJ45
Maximum cable length	Between nodes: 100 m, total length: 200 m

6.1 GM1 Controller

- Connect the cable that is connected to the "EtherCAT port" of the GM1 Controller (EtherCAT) to the "X2A Connector (RX)" of the servo amplifier. In the same way, connect between amplifiers from X2B (TX) to X2A (RX).

- Always use shielded twisted pair (STP) cables that are compatible with category 5e or higher.
- Turn OFF the power to the system before wiring cables.
- To prevent the cable from coming off, securely connect the connector of the cable to the network connector (RJ45 connector) of the unit.
- The Ethernet hub cannot be used.
- For detailed information of cable specifications and precautions, refer to the data "RTEX Cable" listed on the web page.

Wiring to LAN port

Item	Specifications
Max. segment length	100 m ^(Note 1)
Max. distance between nodes	100BASE-TX 2 segments
	10BASE-T 5 segments
Communication cable	Shielded twisted pair (TIA/EIA-568B CAT5e or higher)

(Note 1) The standards cite 100m as the maximum, but noise resistance measures such as attaching a ferrite core may be necessary in some cases, depending on the usage environment. Also, it is recommended to position a hub near the control board, and limit the length within 10m.

6.1.3 Mounting SD/SDHC Memory card

Preparation of the SD Memory Card and SDHC Memory Card

■ Usable SD memory card and SDHC memory cards

We recommend SLC SD Memory Cards and SLC SDHC Memory Cards.

Logo printed on the GM1 Controller (RTEX-compatible / EtherCAT-compatible)	Usable SD (SDHC) memory cards	
	Card type	Capacity
	SD memory card	2 GB
	SDHC memory card	4 GB to 32 GB

■ Precautions on handling the SD memory card and SDHC memory card

The data saved in the SD memory card or in the SDHC memory card may be lost in the following cases. We assume no responsibility whatsoever for the loss of saved data.

- When the user or a third party has misused the SD memory card or SDHC memory card
- When the SD memory card or SDHC memory card was affected by any static electricity or electrical noise
- When the SD memory card or SDHC memory card was taken out, or the power supply to the GM1 Controller (RTEX-compatible / EtherCAT-compatible) was turned OFF, while the card was being accessed to save or delete data

- It is recommended to save important data in another media for backup.
- Never remove the card or turn OFF the power supply to the GM1 Controller (RTEX-compatible / EtherCAT-compatible) while the "SD" LED on the GM1 Controller (RTEX-compatible / EtherCAT-compatible) is lit (data is being read from or written into the card). Data may be damaged.
- Do not use an SD memory card or SDHC memory card that has a memory capacity larger than the usable capacity. Data in the card may be damaged.
- Implements SD memory card or SDHC memory card management to prevent data in the card from being leaked to third parties.

■ Formatting the SD memory card and SDHC memory card

In principle, the SD memory card and SDHC memory card have been formatted by the time of purchase, and no formatting by the user is required. If formatting becomes necessary, download the SD formatter software from the SD association site and format the memory card.

Info.

- The SD memory card or SDHC memory card file system formatted by PC's standard formatting software does not satisfy the SD memory card or SDHC memory card specifications. Please use the dedicated formatting software.

Inserting the SD Memory Card and SDHC Memory Card

- Do not apply an excessive force to the card cover when opening or closing it or when the cover is left open. Otherwise, the cover attachment part will be deformed to cause malfunction in the cover switch mounted inside the product.

1 2 Procedure

1. Insert the tip of a flat blade screw driver into the cavity on the card cover to open the cover.

2. Insert the SD memory card or SDHC memory card into the SD memory card slot until it is locked in place.

3. Close the SD memory card cover.

6.1 GM1 Controller

Info.

- When removing the SD memory card or SDHC memory card, make sure that the "SD" LED on the GM1 Controller (RTEX-compatible / EtherCAT-compatible) is not lit.

6.1.4 Wiring to General purpose I/O or High-speed Counter input

Input Wiring

■ Connection of photoelectric sensor and proximity sensor

Relay output type

NPN open collector output type

Voltage output type

Two-wire output type

■ Precaution when using LED-equipped reed switch

When a LED is connected in series to an input contact such as LED-equipped reed switch, make sure that the voltage applied to the GM1 input terminal is greater than the ON voltage. In particular, take care when connecting a number of switches in series.

■ Precaution when using two-wire type sensor

If the input to the GM1 does not turn OFF because of leakage current from the two-wire type photoelectric sensor or proximity sensor, connect a bleeder resistor as shown below.

6.1 GM1 Controller

■ Precaution when using LED-equipped limit switch

If the input to the GM1 does not turn OFF because of leakage current from the LED-equipped limit switch, connect a bleeder resistor as shown on below.

Output Wiring

■ Protective circuit for inductive loads

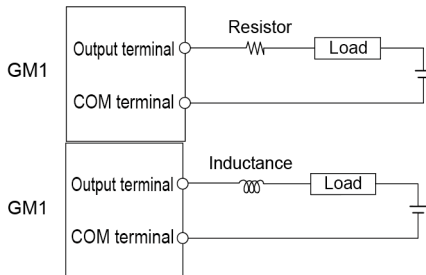

With an inductive load, a protective circuit should be installed in parallel with the load.

Diode	Reverse breakdown voltage	Three times higher than load voltage or more
	Average rectified current	Higher than load current

■ Precautions when using capacitive loads

When connecting loads with large in-rush currents, to minimize their effect, connect a protection circuit as shown below.

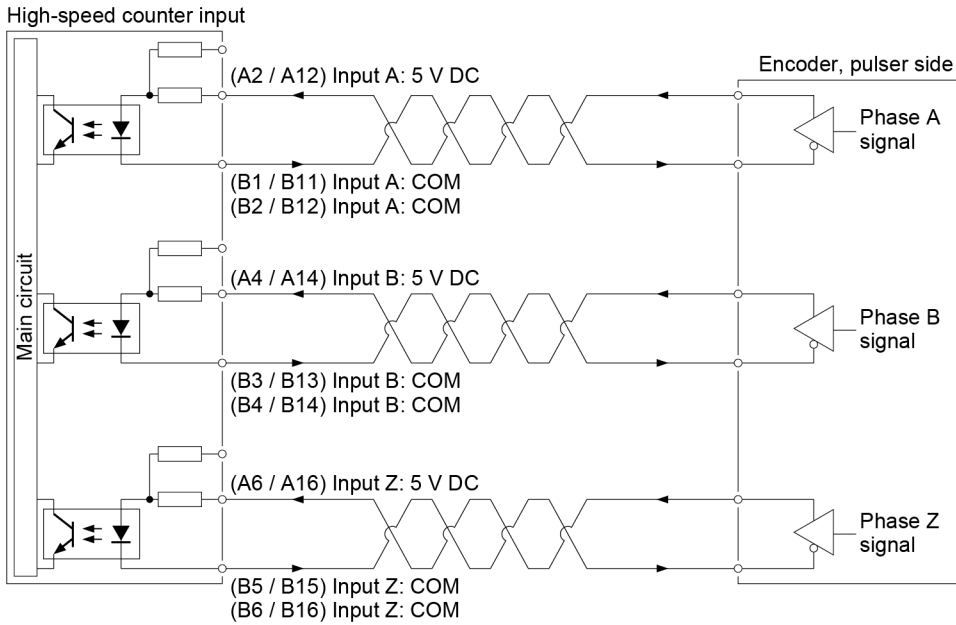

High-speed Counter Input Wiring

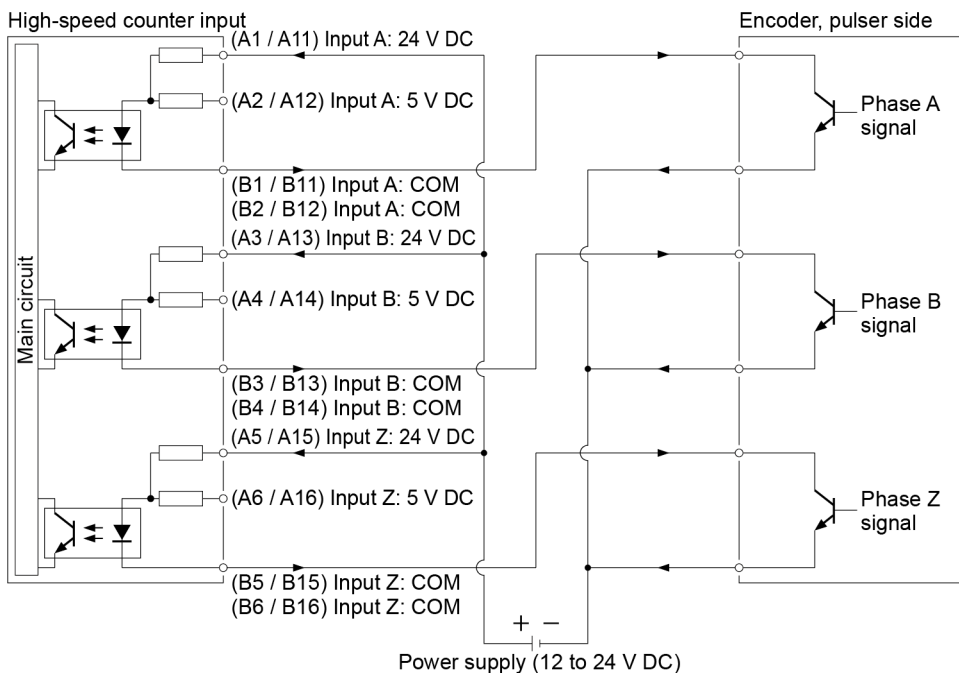

- For the connection between the count input (phases A, B, Z) and encoder, etc., use shielded twisted-pair cables.
- The length of connected wires should be 10 m or below.

■ For line driver of encoder input

■ For transistor open collector type of encoder input

■ For sensor input

Precautions

■ Wiring arrangement

- Arrange the wiring so that the input and output wiring are separated, and these wirings are separated from the power wiring, as much as possible.
- Do not route them through the same duct or tie them in a bundle.
- Separate the I/O wires from the power and high voltage wires by at least 100 mm.

■ Selection of wires

- Be sure to select the thickness (dia.) of the input and output wires while taking into consideration the required current capacity.

■ The NC terminals

- The NC terminals on the terminal block are unused. Do not use these terminals to relay wires because the terminals include those connected internally.

■ Power supply

- Wiring should be carried out after the power supply to the GM1 was turned OFF. Also turn OFF the power supply when connecting the GM1 Controller (RTEX-compatible / EtherCAT-compatible) to expansion units. If they are connected during the power supply is on, it may cause the fault or malfunction.

6.1.5 Wiring to the Screw-tightening Type Connector

The communication port has a screw-tightening type terminal block. Use the following items for wiring.

■ Compatible wires (stranded wire)

Size	Nominal cross-sectional area
AWG#26 to 16	0.14 mm ² to 1.5 mm ²

■ Compatible wires (stranded wire) for rod terminal connection

Connection	Size	Cross-sectional area
Rod terminal (without insulation sleeve)	AWG#24 to 16	0.25 mm ² to 1.5 mm ²
Ferrule (with insulation sleeve)	AWG#24 to 20	0.25 mm ² to 0.5 mm ²

■ Special tool to tighten the terminal block of communication block

To tighten terminals, use a screwdriver from Phoenix Contact (model No. SZS 0,4 x 2,5, product No. 1205037, blade size 0.4 x 2.5). The tightening torque should be 0.22 to 0.25 N·m.

■ Wiring method

1. Strip the sheath from the wire.

2. Insert wire into terminal hole until it stops. Tighten the screw clockwise to fix it in place. (The tightening torque should be 0.22 to 0.25 N·m.)

6.1 GM1 Controller

■ Precautions on wiring

The following precautions should be observed to avoid broken or disconnected wires.

- When removing the wire's sheath, be careful not to scratch the core wire.
- Connect the core wire without twisting.
- Connect the core wire without soldering. Otherwise, the core wire may break due to vibration.
- After wiring, make sure stress is not applied to the wire.
- Due to the terminal construction, if the wire is fastened in a counterclockwise direction, the connection is faulty. Disconnect the wire, check the terminal hole, and then re-connect the wire.

6.1.6 Connection of MIL connector

Discrete-wire Connector

This is a connector that allows loose wires to be connected without removing the wire's insulation. Use a special tool for wire connection.

■ Discrete-wire connector (40P)

■ AFP2801 Discrete-wire Connector (Purchase separately)

Composition of parts	Quantity (2 sets)
Housing (40P)	1 pc.
Semi-cover (40P)	2 pc.
Contact (For AWG22 and AWG24 5 pins)	8 pc.

■ AXY52000FP Dedicated crimping tool (Purchase separately)

Wiring the Discrete-wire Connector

- When performing wiring work, refer to the instruction manual of the crimping tool in order to prevent faulty wiring.

1 2

Procedure

1. Bend and break the contact, and set it in the crimping tool.

2. Insert the wire without removing its insulation until it stops, and lightly grip the crimping tool.

3. The contact appears as shown below after it is crimped. Confirm the following two points.
 1. The wire must be embraced inside the clamped part.
 2. The wire must be inserted to the end.

4. Insert the wire with the contact into the housing.

5. When all the wires have been inserted, fit the semi-cover into place.

6.1 GM1 Controller

i Info.

- If there is a wiring mistake or the wire is incorrectly press-fit, use the crimping tool to remove the contact.
 1. Set the pin of the crimping tool at the position indicated by an arrow.

2. Hold the housing with fingers and pull the wire.

Push in connector

This is a 40 pin push-in connector made by DEGSON.

■ Push in connector

Product name	Model number	Note
Push in connector set (40 P)	AFP2808	2 pieces

■ Rod terminals with compatible insulation sleeve

Use the following rod terminals.

Manufacturer	Model number	Size	Cross-sectional area
Phoenix Contact Co. Ltd	AI0,34-8TQ	AWG#22	0.34 mm ²

■ Crimping tool dedicated to rod terminals

Manufacturer	Model number
Phoenix Contact Co. Ltd	CRIMPFOX 10S

Mounting to the Unit

■ Mounting to the unit

Follow the procedure below to mount the push-in connector to the unit.

1 2 Procedure

1. Open the clasps of the MIL connector.

6.1 GM1 Controller

2. Insert the push-in connector into the MIL connector. When inserting the push-in connector, make sure that the triangular marking is at the top.

3. Insert the push-in connector into the MIL connector until its clasps are closed.

Wiring to the Push-in Connector

The wiring procedure is as follows.

Note

Precautions on wiring

- When removing the wire's sheath, be careful not to scratch the core wire.
- After wiring, make sure stress is not applied to the wire.
- Do not solder the core wire. Soldering the core wire may cause wire breakage due to vibration.

1 2 Procedure

1. Strip the sheath from the wire.

2. Attach the rod terminal to the core wire part. When attaching it, do not twist the core wire.

3. After attaching the rod terminal, use the dedicated rod terminal crimping tool to crimp it.
4. After crimping the rod terminal, insert the wire into the push-in connector.

i Info.

After inserting the wire, ensure that it does not come out.

Wire Replacement

The wire replacement procedure is as follows.

To remove the wire, use the following dedicated tool or equivalent flat-blade screwdriver.

■ Dedicated tool

Manufacturer	Model number	Remarks
Phoenix Contact Co. Ltd	SZS 0, 4x2, 5	Blade width 0.4 × Blade thickness 2.5

1 2 Procedure

1. Use the dedicated tool or a flat-blade screwdriver to push the release button on the push-in connector.

2. While pushing the button, remove the wire.

6.1 GM1 Controller

3. Insert a new wire. For details on how to insert a wire, refer to "[Wiring to the Push-in Connector](#)".

i Info.

- Pushing the release button releases the wire locks on both sides of the button. After wire replacement, ensure that the wire does not come out.

Removing from the Unit

Follow the procedure below to remove the push-in connector from the unit.

1 2 Procedure

1. Open the clasps of the MIL connector.

2. Remove the push-in connector from the unit.

6.3 Analog I/O Unit

6.3.1 Wiring to Analog I/O Unit

Analog input wiring

This section describes the input circuit and wiring of the analog input unit. The circuit for the voltage input is the same as that for the current input.

(Note 1) The circuit connection varies depending on parameter settings.

(Note 2) "n" indicates the channel number.

Terminal layout diagram

The terminal used by the analog voltage input is common to that used by the analog current input.

Analog output wiring

This section describes the output circuit and wiring of the analog output unit when the output range is set to the voltage output (-10 to +10 V, 0 to +10 V, -5 to +5 V, 0 to +5 V, +1 to +5 V).

Case: Analog voltage input

Case: Analog current input

Terminal layout diagram

The terminal used by the analog voltage output is different from that used by the analog current output.

- Case: Analog voltage input : V_n
 - Case: Analog current input : I_n
- "n" indicates the channel number (0 to 3)

Precautions

- Use double-core twisted-pair shielded wires for connecting analog signals.
- Connect the shield of the shielded cable to the ground on the load device side. However, depending on the conditions of the external noise, it may be better to ground externally or not to ground the shield.
- Do not have the analog input wiring close to AC wires, power wires, or load line from a device other than the Motion Controller. Also, do not bundle it with them.
- The NC terminals on the terminal block are unused. Do not use these terminals to relay wires because the terminals include those connected internally.

6.3.2 Connectioning to Push in connector

Push-in Connector

A spring connection type is used for the terminal block of the analog I/O section. Perform wire connection properly by referring to the compatible products listed in the following tables.

■ Compatible wires (stranded wire)

Size	Nominal cross-sectional area
AWG#24 to 16	0.2 mm ² to 1.5 mm ²

■ Compatible wires (stranded wire) for rod terminal connection

Connection	Size	Cross-sectional area
Rod terminal (without insulation sleeve) Ferrule (without insulation sleeve)	AWG#24 - 16	0.25 mm ² to 1.5 mm ²
Ferrule (with insulation sleeve)	AWG#26 - 18	0.14 mm ² to 0.75 mm ²

wire connection method to Push in connector

Perform wire connection of the terminal block according to the following procedure.

1 2 Procedure

1. Strip the sheath from the electric wire.

2. While pressing the tab on the terminal block using a flat-blade screwdriver, insert the wire all the way until it stops. Confirm that the electric wire is fixed in place when the screwdriver is released.

(Note 1) The above illustration shows an eight-pin type when it is removed from the unit.

(Note 2) Use a screwdriver listed in the following table as a dedicated tool or equivalent (blade width: 0.4 x 2.5) .

6.3 Analog I/O Unit

Manufacturer	Model number	Production number
Phoenix Contact Co., Ltd	SZS 0, 4x2, 5	1205037

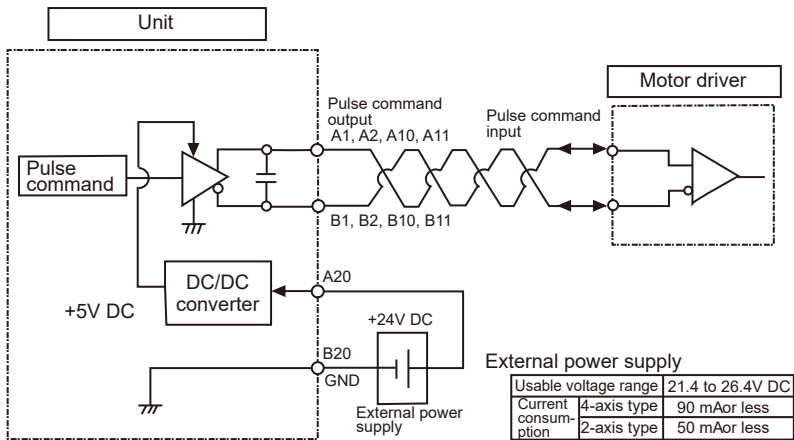

- The following precautions should be observed to avoid broken or disconnected wires.
 - When removing the wire's sheath, be careful not to scratch the core wire.
 - Do not twist the wires to connect them.
 - Do not solder the wires to connect them. The solder may break due to vibration.
 - After wiring, make sure stress is not applied to the wire.

6.4 Pulse Output Unit

6.4.1 Pulse output Wiring

Supplying Power for Internal Circuit Drive

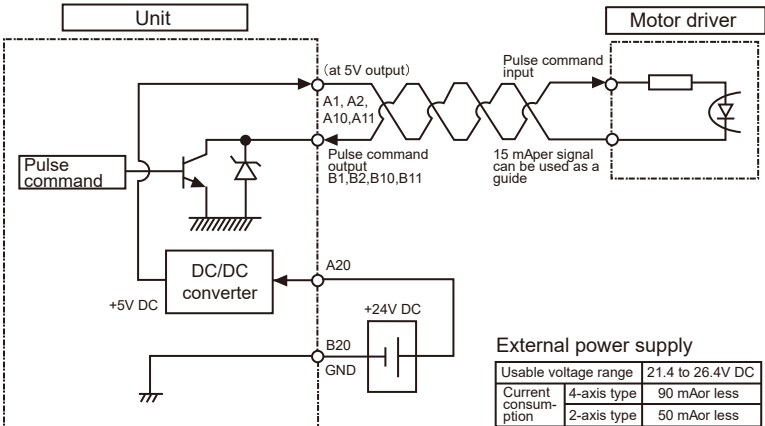

■ Case:Line Driver Output Type

The illustration shows one signal component extracted from the overall configuration.

■ Case:Transistor Output Type

The power supply for the pulser command output circuit can be taken from the 5 V DC output pins.

- When transistor output (open collector output) is used, a value of 15 mA per signal should be used as a guide. If 15 mA is exceeded, an appropriate resistance should be added.

6.4 Pulse Output Unit

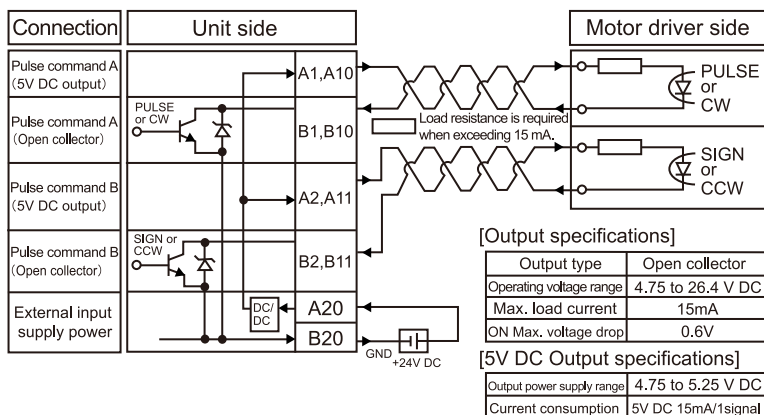

Connection of Pulse Command Output Signal

The pulse output unit is equipped with two output types to match two types of motor driver interfaces. Connect to either one of them depending on the interface of the motor driver to be used.

■ Case:Line Driver Output Type

■ Case:Transistor Output Type

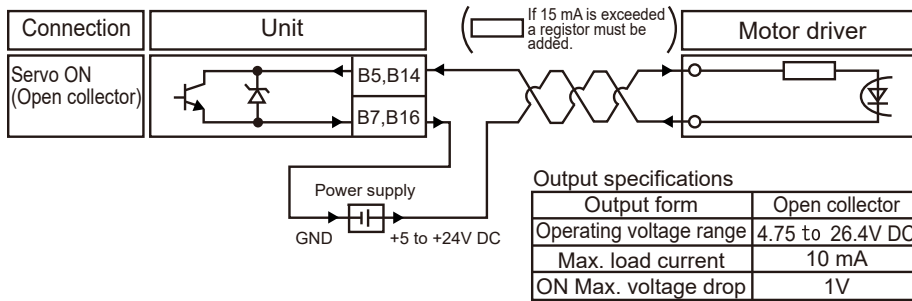

i Info.

- A value of 15 mA per signal should be used as a guide. If this is exceeded, resistance should be added.
- The symbol below indicates a twisted-pair wiring. We recommend using twisted-pair cables as the wiring between the output of the pulse output unit and the motor driver.

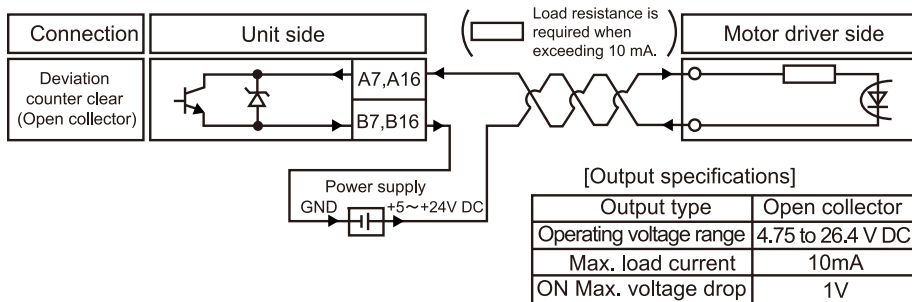

Connection of Servo ON Output

- This is an example showing the connection of the servo ON to the servo amplifier.
- An external power supply (+5 V DC to +24 V DC) must be provided for the connection.

Connection of Deviation Counter Clear Output Signal

- This is an example showing the connection of the counter clear input to the servo amplifier.
- An external power supply (+5 V DC to +24 V DC) must be provided for the connection.

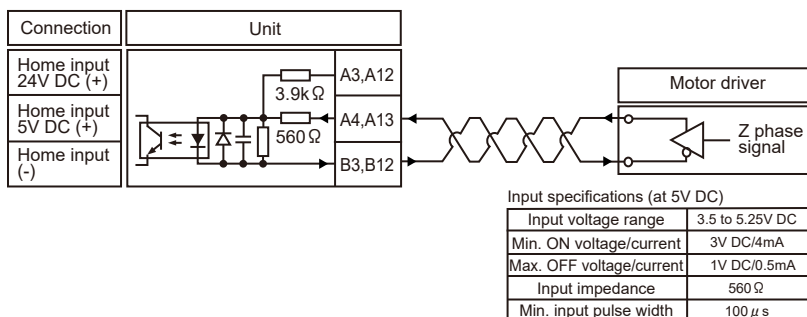

Note

- Always use twisted-pair cables for wiring.
- The current which can be conducted as the deviation counter clear output signal is 10 mA max. If this is exceeded, a resistance should be added.

Connection precautions

■ Connection of Home Input (When connecting to motor driver Z phase output)

6.4 Pulse Output Unit

■ Connection of Home Input (When connecting to an external switch/sensor)

Input specifications (at 24V DC)

Input voltage range	21.6 to 26.4V DC
Min. ON voltage/current	19.2V DC/5.5mA
Max. OFF voltage/current	2V DC/2mA
Input impedance	3.9kΩ
Min. input pulse width	100 μs

■ Connection of Near Home Input Signal

[Input specifications]

Input voltage range	21.6 to 26.4 V DC
Min. ON voltage/current	19.2V DC/5.0mA
Max. OFF voltage/current	2V DC/1.5mA
Input impedance	Approx. 3.6kΩ
Min. input pulse width	500μs

(Note 1) Terminal numbers B4 and B13 are common for the Near home input, Over limit input (+), Over limit input (-) and Positioning control start input.

■ Connection of Over Limit Input Signal

Input voltage range	21.6 to 26.4 V DC
Min. ON voltage/current	19.2V DC/2.6mA
Max. OFF voltage/current	2V DC/1.5mA
Input impedance	Approx. 6.8kΩ
Min. input pulse width	500μs

(Note 1) Terminal numbers B4 and B13 are common for the Near home input, Over limit input (+), Over limit input (-) and Positioning control start input.

■ Connection of Positioning Control Start Input (Timing Input)

[Input specifications]

Input voltage range	21.6~26.4 V DC
Min. ON voltage/current	19.2 V DC/2.6 mA
Max. OFF voltage/current	2 V DC/1.5 mA
Input impedance	Approx. 6.8 k Ω
Min. input pulse width	500 μ s

(Note 1) Terminal numbers B4 and B13 are common for the Near home input, Over limit input (+), Over limit input (-) and Positioning control start input.

6.5 Serial Communication Unit

6.5 Serial Communication Unit

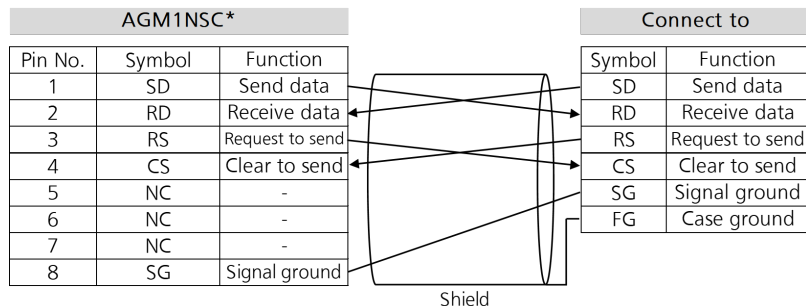

6.5.1 Connection of RS-232C

Example of RS-232C Wiring

- When Setting No Flow Control

- When Setting Flow Control

Precautions

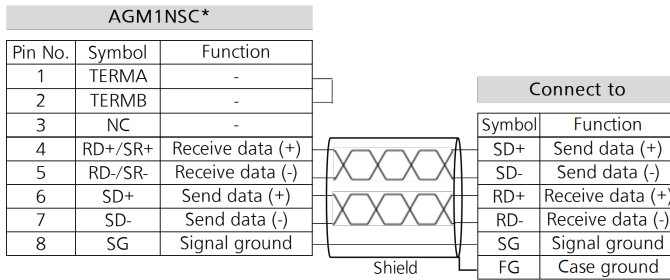

- Use shielded wires for RS-232C communication.
- Connect the shield of the shielded cable to the ground on the load device side. However, depending on the conditions of the external noise, it may be better to ground externally or not to ground the shield.
- Do not have the RS-232C communication wiring close to AC wires, power wires, or load line from a device other than the Motion Controller. Also, do not bundle it with them.
- The NC terminals on the terminal block are unused. Do not use these terminals to relay wires because the terminals include those connected internally.

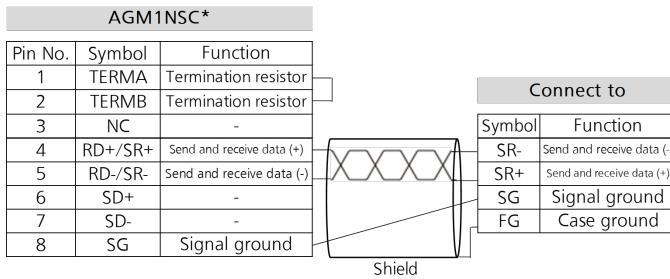

6.5.2 Connection of RS-422A/485

Example of RS-422A/485 Wiring

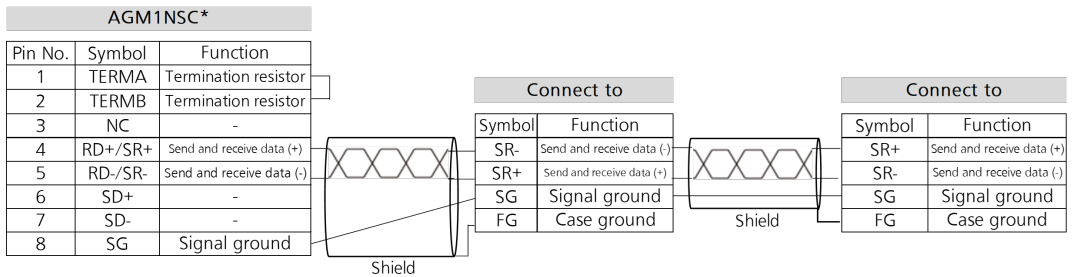

- Example of RS-422A Wiring

- Example of RS-485 Wiring (1-to-1 Connection)

- Example of RS-485 Wiring (1-to-N Connection)

6.5 Serial Communication Unit

Precautions

- When the unit is set up for RS-422A, connect a termination resistor. When the unit is set up for RS-485, connect a termination resistor only when it is a terminal unit.

To connect the GM1's termination resistor, short-circuit the TERMA and TERMB terminals.

- Use twisted-pair shielded wires for connection for RS-422A/485 communication wiring.
- Although the unit communicates even when the SG terminal is not connected, connecting it to the SG terminal on the load device side may improve noise immunity.

- Connect the shield of the shielded cable to the ground on the load device side.

However, depending on the conditions of the external noise, it may be better to ground externally or not to ground the shield.

- Do not have the RS-422A/485 communication wiring close to AC wires, power wires, or load line from a device other than the Motion Controller. Also, do not bundle it with them.
- The NC terminals on the terminal block are unused. Do not use these terminals to relay wires because the terminals include those connected internally.

6.5.3 Wiring to the Screw-tightening Type Connector

The communication port has a screw-tightening type terminal block. Use the following items for wiring.

■ Compatible wires (stranded wire)

Connection	Size	Cross-sectional area
1-wire connection	AWG#26 to 16	0.14 mm ² to 1.5 mm ²
2-wire connection ^(Note 1)	AWG#28 to 18	0.18 mm ² to 0.75 mm ²

■ Compatible wires (stranded wire) for rod terminal connection

Connection	Size	Cross-sectional area
1-wire connection, rod terminal (without insulation sleeve)	AWG#24 to 16	0.25 mm ² to 1.5 mm ²
1-wire connection, ferrule (with insulation sleeve)	AWG#24 to 20	0.25 mm ² to 0.50 mm ²
2-wire connection, ferrule (without insulation sleeve) ^(Note 1)	AWG#24 to 22	0.25 mm ² to 0.34 mm ²
2-wire connection, TWIN ferrule (with insulation sleeve) ^(Note 1)	AWG#20	0.5 mm ²

(Note 1) For conformance to UL/cUL standards, use an appropriate UL/cUL listed TWIN ferrule (CCN: ZMLF/7) to connect the machine, equipment, etc.

■ Special tool to tighten the terminal block of communication block

To tighten terminals, use a screwdriver from Phoenix Contact (model No. SZS 0,4 x 2,5, product No. 1205037, blade size 0.4 x 2.5). The tightening torque should be 0.22 to 0.25 N·m.

■ Wiring method

1. Strip the sheath from the wire.

2. Insert wire into terminal hole until it stops. Tighten the screw clockwise to fix it in place. (The tightening torque should be 0.22 to 0.25 N·m.)

6.5 Serial Communication Unit

■ Precautions on wiring

The following precautions should be observed to avoid broken or disconnected wires.

- When removing the wire's sheath, be careful not to scratch the core wire.
- Connect the core wire without twisting.
- Connect the core wire without soldering. Otherwise, the core wire may break due to vibration.
- After wiring, make sure stress is not applied to the wire.
- Due to the terminal construction, if the wire is fastened in a counterclockwise direction, the connection is faulty. Disconnect the wire, check the terminal hole, and then re-connect the wire.
- If two wires are connected to the RS-485 terminal, use the same wire material of the same cross-sectional area.

6.6 Safety Measures

6.6.1 General Safety Measures

■ Precautions regarding system design

- In the system where the GM1 is used, malfunction may occur for the following reasons:
 - Power on timing differences between the GM1 system and I/O devices or power devices.
 - Response time lag when a momentary power failure occurs.
 - Abnormality in the GM1 Controller, external power supply, or other devices.

In order to prevent a malfunction resulting in an error or accident of the overall system, take adequate safety measures.

■ Installation of an interlock circuit

- When controlling conflicting operations such as the motor rotation in clockwise or counter-clockwise direction, provide an interlock circuit external to the GM1.

■ Installation of an emergency stop circuit

- Provide an emergency stop circuit external to the GM1 to turn OFF the power supply of the output device.

■ Power supply sequence

- Start the GM1 only after I/O devices and power devices are energized.
- In case of stopping the operation of the GM1, have the I/O devices or power devices turned OFF after the GM1 has stopped operating.

■ Grounding

- When installing the GM1 next to devices that generate high voltages from switching, such as inverters, do not ground them together. Connect an exclusive ground with a resistance of 100 Ω or less.

6.6.2 Momentary Power Failure

■ Operations when a momentary power failure occurs

- If the duration of the momentary power failure is less than 10 ms, the GM1 continues to operate. If the power is off for 10 ms or longer, operation changes depending on the combination of units, the power supply voltage, and other factors. (In some cases, operation may be the same as that for a power supply reset.)

6.6.3 Watchdog Timer

- The watchdog timer is a program error and hardware error detection timer.

6.6 Safety Measures

- When the watchdog timer is activated, the "Alarm" LED on the front of the Controller is lit. When this occurs, all outputs to the output units are turned OFF and the unit is put in halted state.

7.1 Installation Environment

7.1 Installation Environment

■ Installation environment

Use the unit within the range of the general specifications when installing.

- Ambient temperature: 0 to +55°C
- Ambient humidity: 10 to 95% RH (at 25°C, non-condensing)
- Pollution degree: 2
- Altitude: 2,000 m above sea level or lower
- Overvoltage category: II or less
- Installation place: It is assumed to be used in an environment inside a control panel (metal panel with sufficient strength) that provides a protection rating of IP54 or higher.

Do not use it in the following environments.

- Direct sunlight
- Sudden temperature changes causing condensation.
- Inflammable or corrosive gas.
- Excessive airborne dust, metal particles or saline matter.
- Benzine, paint thinner, alcohol or other organic solvents or strong alkaline solutions such as ammonia or caustic soda.
- Direct vibration, shock or direct drop of water.
- Influence from power transmission lines, high voltage equipment, power cables, power equipment, radio transmitters, or any other equipment that would generate high switching surges. (100 mm or more)

■ Handling instructions

- Do not directly touch connector pins directly to prevent electrostatic discharge failure.
- Always rid yourself of any static electricity before handling this product.
- Do not connect a unit other than our GM1 series to the side connector on the unit.
- Use copper wires with a temperature rating of 90°C.

7.2 Attaching to Control panel

- Install the unit at least 50 mm away from other devices or wiring duct on the left and right sides and top and bottom sides of the unit to provide a ventilation space.

■ Measures regarding heat radiation

- As countermeasures against heat radiation, install the unit in the direction shown below.

- Do not install the unit stacked up, horizontally or upside down. Doing so will prevent proper cooling of the unit and cause overheating inside.

Installing the unit upside down

Installing the unit so that it stays in a horizontal position

Installing the unit so that the DIN rail is mounted vertically

- Do not install the unit above devices which generate heat such as heaters, transformers or large scale resistors.
- In order to eliminate any effects from noise emission, power wires and electromagnetic devices should be kept at least 100 mm away from the surfaces of the unit. When installing the unit behind the doors of the control board, be especially careful to secure clearances as above.

7.2 Attaching to Control panel

- Secure a clearance of at least 170 mm from the mounting surface of the GM1Series for connecting tool software cables.

7.3 Attaching or Removing the Unit

- Install the expansion unit between the GM1 Controller (RTEX-compatible / EtherCAT-compatible) and the end unit.
- Make sure to connect an end unit.
- Make sure to turn OFF the power supply before installing the unit.
- Do not directly touch the connector part of the unit.
- Make sure that the connector parts are not stressed when and after installing the unit.

7.3.1 Attaching the Unit

1 2 Procedure

1. Raise the expansion hooks on the sides of the unit with a screwdriver to release them.

2. Attach the unit connectors on the side of the unit to those on the other unit.

3. Lower the expansion hooks to lock the units in place.

7.3 Attaching or Removing the Unit

7.3.2 Removing the Unit

1 2 Procedure

1. Raise expansion hooks on the sides of the unit with a screwdriver to release them.

2. Slide the unit sideways to remove it.

7.4 Attaching or Removing the DIN Rail

7.4.1 Attaching to DIN Rail

1 2 Procedure

1. Using a screwdriver, push down the DIN rail attachment lever on the back of each unit.

2. Fit the top of the unit attachment part into the DIN rail.
3. While pressing down the unit attachment part onto the DIN rail, fit the bottom of the unit attachment part into the DIN rail.

4. Push up the DIN rail attachment lever on the back of the unit until it "clicks" to lock.

7.4 Attaching or Removing the DIN Rail

7.4.2 Removing from DIN Rail

1 2 Procedure

1. Using a screwdriver, push down the DIN rail attachment lever on the back of each unit.

2. Pull the bottom of the unit toward you.
3. While holding up the unit, remove it from the DIN rail.

8.1 Self-diagnostic Function

The GM1 Controller (RTEX-compatible / EtherCAT-compatible) has a self-diagnostic function which identifies errors and stops operation if necessary.

Indications concerning self-diagnosis are as follows.

■ LEDs related to self-diagnostic errors

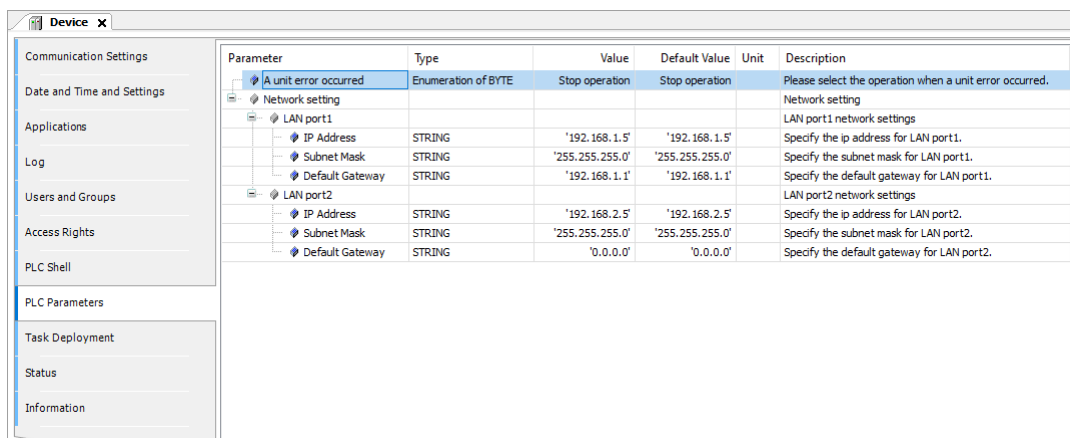

●: Lit, ▲: Flashing, ○: Unlit, —: Indefinite (Lit or unlit)

	LED display				Description	Operation status
	RUN	STOP	ERROR	ALARM		
Normal	●	○	○	○	Normal operation	Operating

	○	●	—	●	System error	Stopped

8.2 Operation Status at the Time of Error

■ PLC parameter setting

Operation mode at the time of error can be set to continue operation or stop operation in the PLC parameter setting.

The screenshot shows a software interface for PLC parameter settings. On the left is a navigation pane with categories: Communication Settings, Date and Time and Settings, Applications, Log, Users and Groups, Access Rights, PLC Shell, PLC Parameters, Task Deployment, Status, and Information. The main area displays a tree view of parameters under 'Network setting', which is expanded to show 'LAN port1' and 'LAN port2'. Each port has three sub-parameters: IP Address, Subnet Mask, and Default Gateway. The 'A unit error occurred' parameter is highlighted at the top of the tree.

Parameter	Type	Value	Default Value	Unit	Description
A unit error occurred	Enumeration of BYTE	Stop operation	Stop operation		Please select the operation when a unit error occurred.
Network setting					Network setting
LAN port1					LAN port1 network settings
IP Address	STRING	'192.168.1.5'	'192.168.1.5'		Specify the ip address for LAN port1.

■ Condition

A self-diagnostic error has occurred.

■ Solution

Check the condition according to the following procedure.

1. On the GM Programmer, select **Online>Status** and check the error content (error code).
2. Switch to the STOP mode.
3. On the Status screen of the GM Programmer, check the error information.
In case of an operation continue error, the error can be resolved by RTEX Reset / Error Clear.

4. Cancel the situation in accordance with the error code.

i Info.

- For the error codes, refer to the , *GM1 Controller RTEX User's Manual (Operation)* or *GM1 Controller EtherCAT User's Manual (Operation)*.

8.3.2 POWER LED Does not Light on the Control Unit

■ Condition

It is possible that sufficient power is not supplied.

■ Solution

1. Power off the unit and double-check the wiring status. (e.g. Is there any loose terminal?)
2. Check if the output of the power supply to the control unit does not exceed the rating.
If the 24-V power supply is not sufficient, review the power supply configuration.
Disconnect the power supply wiring to the other devices if the power supplied to the control unit is shared with them.

8.3.3 Desired Output Is Not Obtained: Checking when the Output Does Not Turn ON / OFF

■ Condition

Both software factors such as program or I/O allocation and hardware factors such as wiring or power supply can be assumed.

■ Solution

1. Check if the output display LED of the unit is lit.
If it is lit, proceed to the following step. If it is not lit, proceed to step 4.
2. Recheck the wiring of the loads for loose terminals, etc.
3. Check if proper voltage is applied to the loads.
If the voltage is properly applied to the load, there is probably an abnormality in the load.
If the voltage is not applied to the load, there is probably an abnormality in the output section of the unit.
4. Using the GM Programmer, check the monitor function by forcibly setting or resetting the output.
If the output LED of the unit changes, it is possible that the output has been overwritten in the program.
If the LED does not change, there is probably an abnormality in the output section of the unit.

8.3 What to Do If an Error Occurs

8.3.4 If the ALARM LED Is Lit on the Expansion Unit

■ Condition

If the ALARM LED is lit on the expansion unit, there may be a system failure.

■ Solution

1. Turn the system OFF and then ON.
2. If the system is not reset, there may be a hardware failure. Please consult your Panasonic representative.

8.3.5 If the ALARM LED Is Unlit on the Expansion Unit

■ Condition

It can be assumed that a system error has occurred in the expansion unit connected to the control unit or in the control unit.

■ Solution

Clarify the situation in the following procedure.

1. Check if an end unit is connected to the last expansion unit.
2. Check the wiring of the cables connected to the expansion units and wiring of the power supply.
3. Clear the self-diagnosis error of the control unit.
4. Restart the power supply of the control unit.

9 Maintenance and Inspection

9.1 Inspection.....9-2

9.1 Inspection

9.1 Inspection

To always use the unit in optimal conditions, carry out routine or periodic inspections.

Warranty

Warranty Period

The warranty period of the Product shall be 12 months from the ex-factory date or 18 months from the date of manufacturing unless otherwise specified between both parties.

Warranty Scope

Panasonic warrants the replacement of the defected parts of the Product or repair of them when the defects of the Product occur during the Warranty Period, and when the defects are under Panasonic responsibility. This Warranty only covers the Product itself and does not cover any damage to your company and the third party incurred by the Product, such as damage that is induced by an object machined or produced using the Product or by the defects of the Product. This Warranty shall be exempted in the following cases,

1. Defects resulting from misuse and/or repair or modification by the customer.
2. Defects resulting from drop of the Product or damage during transportation.
3. Defects resulting from improper usage of the Product beyond the Specifications.
4. Defects resulting from fire, earthquake, lightening, flood, damage from salt, abnormal voltage or other Act of God, or other disaster.
5. Defects resulting from the intrusion of foreign material to the Product, such as water, oil or metallic particles.
6. Parts exceeding their standard lifetime specified in this document.
7. The machines are not assembled in accordance with the instructions or precautions noted in this specification.
8. When the machine does not match the Product assembled in the machine.
9. When the machine condition is not caused by Panasonic reasons.
10. Defects that Panasonic could not foresee at the time of delivery of the Product.

Cautions for Proper Use

■ Selection of a power supply

- Use a low noise power supply.
- The inherent noise resistance is sufficient for the noise superimposed on the power wires, however, the noise can be attenuated further by using the isolation transformer / insulated power supply.

■ Isolation of power supply systems

- Wiring to the units, I/O devices, and other power devices should have separate wiring systems.

■ Power supply sequence

- Start the GM1 controller only after I/O devices and power devices are energized. In case of stopping the operation of the GM1 controller, have the I/O devices or power devices turned OFF after the GM1 controller has stopped operating.

■ Grounding

- The grounding connection should have a resistance of 100 Ω or less.
- The point of grounding should be as close to the GM1 controller as possible. The ground wire should be as short as possible.
- Sharing the ground with another device may have an adverse effect. Therefore, be sure that grounding is dedicated.

Conversely, depending on your environment, grounding may cause a problem. Do not ground the function earth when grounding a plus (+) terminal of the power.

Cautions for Proper Use

■ **Wiring**

- Turn OFF the power supply when carry out wiring or connecting the GM1 controller to expansion units.
- Noise resistance measures such as attaching a noise filter, a surge absorber or a ferrite core may be necessary in some cases, depending on the usage environment.

■ **Installation of an interlock circuit**

- When controlling conflicting operations such as the motor rotation in clockwise or counter-clockwise direction, provide an interlock circuit external to the GM1 controller.

■ **Installation of an emergency stop circuit**

- Provide an emergency stop circuit external to the GM1 controller to turn OFF the power supply of the output device.

■ **Installation environment**

Do not use it in the following environments.

- Direct sunlight
- Sudden temperature changes causing condensation.
- Inflammable or corrosive gas.
- Excessive airborne dust, metal particles or saline matter.
- Benzine, paint thinner, alcohol or other organic solvents or strong alkaline solutions such as ammonia or caustic soda.
- Direct vibration, shock or direct drop of water.
- Influence from power transmission lines, high voltage equipment, power cables, power equipment, radio transmitters, or any other equipment that would generate high switching surges. (100 mm or more)

■ **Handling instructions**

- Before touching the unit, always touch a grounded piece of metal in order to discharge static electricity.
- Always rid yourself of any static electricity before handling this product.
- Do not connect a unit other than our GM1 series to the side connector on the unit.
- Use copper wires with a temperature rating of 90°C or higher.
